		If no, when and where will it begin/resume? Date _____ Time _____ ☐ AM ☐ PM
		Where:

Conditions found and type of equipment on site: Xing Culvert 50' away from S.F. 8"

Additional Comments or useful information: Small Tiny Hoe Bob Cat

Notice to Excavator

If a pipeline is accidentally damaged, please report it to Northern immediately. **Even a minor damage such as a scrape or coating removal may cause a future safety issue such as a release of natural gas, injuries or property damage.** Excavation employees can learn more at: www.northernnaturalgas.com, then select – Safety.

To avoid damaging a pipeline, excavation can only occur after the pipeline has been physically located:

1. Call the state one-call organization to arrange for Northern to provide the free line location service and on-site assistance **before** any excavating activity begins.
2. Never excavate within 25 feet of Northern's pipelines without Northern personnel present.
3. Prior to excavation near the pipeline, consult the on-site Northern personnel for distance requirements.
4. Look for evidence of a pipeline including such things as caution signs, aerial patrol markers, casing vents and above ground piping.
5. All excavation by any party within 24-inches of the pipeline shall be by manual means.
6. Never assume the location of pipelines because:
   - Pipelines can change directions abruptly between above ground physical evidence.
   - Pipeline depths can vary substantially in short distances.
   - More than one pipeline may be present.
   - Pipelines may have underground connections and appurtenances.

Excavator Company Name: R&R Concrete

Excavator Representative Name (Please Print): CHUCK RUNGE

Excavator Representative Signature: [signature]

Northern Representative Name (Please Print): Travis Beck
