

Safety Training Provided by LMC Inc. of Hartford, SD

Session Title:
Underground Utilities Natural Gas Awareness

Session Length:
1 ½ to 2 hours

RECEIVED
JUL 11 2012
SOUTH DAKOTA PUBLIC
UTILITIES COMMISSION

Description of training topic:

This session is designed to get the employee to think about his safety as well as the general public's safety while doing his job. The case study I will use is the 1998 St. Cloud Minnesota gas pipeline explosion that killed 4, injured 11, and destroyed 6 buildings. We then move through the steps to a safe work environment, plan your work, call one-call 48 hours prior to work starting. Next we will discuss the locate colors and talk about how they are used. In addition we discuss the 18" clearance for excavating and suggest when working with gas that 24" is used.

The next section is an overview of what is in the ground, ending with transmission and distribution gas pipelines and the utilities rules for excavation around these lines and the hazards they each pose. The next topic is the properties of natural gas and the hazards involved with each property. The last portion is on what to do if an incident happens involving a Natural Gas pipeline.

This training is being conducted at the request of Troy Hahn for May Construction. It is being conducted at the Brandon office of Sioux Valley Energy on July 2, 2012 starting at 8:00 am. This training is conducted by Ladd McCluskey, Safety Consultant for LMC Inc. of 25685 Van Demark Ave. Hartford, SD 57033
