

March 2016 Safety Meeting

3/7/2016

Moderators: Jay Wright, Harold Goeden

### Safety Topics,

Muddy conditions during spring thaw; scrape down job sites to reduce slips and falls.

Entering & exiting equipment remember 3 points of contact and always face the machine.

Make sure you take your trench shields with you to the job, and put them in the hole when working.

As the frost comes out of the ground and we move into the rain season be sure to inspect the job and trenches for changes daily or more often as needed.

Discuss One Call ruling, look over job for possible missing locates (meters, phone peds, transformers) on not only on our site but adjoining properties.

Continue to do equipment inspections & turn in inspection sheets weekly

House Keeping- keep the inside of equipment free of garbage, clean windows and mirrors clean.

Maintain the equipment you are using, if you are running it you are responsible for greasing and fueling it.

Stay alert around the crushing area at Eagle pit, and continue to wear your high viz.

### Company Topics

Fill out your paperwork completely

Note any outside subs you use, cones or sawing and measurements of paving removed

# First Rate Ecvavate, Inc

Date

Employee Name	Employee Number	Hours
